PROFESSIONAL SUMMARY

Third-year CS student at Qatar University specializing in AI/ML, with production experience building automation systems using Python, n8n, and the OpenAI API during a remote internship at a Netherlands-based startup. Proven ability to ship real tools from AI automation pipelines to full-stack web applications in fast-moving environments.

EDUCATION

Qatar University

B.S. in Computer Science

Doha, Qatar

Expected Graduation, May 2027

Technical Coursework:

Data Structures & Algorithms, Objected-Oriented Programming, Software Engineering, Discrete Structures, Design & Analysis of Algorithms, Fundamentals of Database, AI Fundamentals, Data Communication and Computer Network, Web development, Operating Systems

EXPERIENCE

AI Automation Internship at Silatha (Remote)

Amsterdam, Netherlands

AI Intern

Dec 2025 – Present

- Engineered and deployed AI-driven automation systems that significantly enhanced team productivity and streamlined internal operations.
- Accelerated workflows by designing and launching automations using n8n, Python, and JavaScript, resulting in a substantial reduction of repetitive tasks and time savings.
- Implemented robust data pipelines and web-scraping solutions, incorporating advanced monitoring and error-handling for reliable, high-integrity data collection.
- Integrated the OpenAI API and various third-party services to build custom tools, effectively expanding the company's proprietary automation capabilities.

AI-Based Aquaponics System Development

Doha, Qatar

Research Intern

Aug 2025 – Nov 2025

- Conducted research on using Reinforcement Learning (RL) for hyperparameter optimization to significantly enhance the performance of Federated Learning models in aquaponics.
- Developed comprehensive project feasibility studies and created prototype AI models using public datasets, strategically minimizing risk prior to physical deployment.
- Directed the practical setup of an AI-driven aquaponics greenhouse at Qatar University, involving the integration of pumps, filters, and sensors for cultivating Nile Tilapia and Lettuce.
- Coordinated and managed cross-institutional collaboration and strategic project planning efforts with international university partners.

PROJECTS

Library Loan Software

Doha, Qatar

Team Member

Sep 2025 – Dec 2025

- Participated in the full-lifecycle development of a semester-long software project simulating a real-world problem, including requirements gathering, specification, design, implementation and testing.
- Collaborated in a team of four, using version control (GitHub issues, projects and wiki) to manage tasks, track progress, and ensure consistent code integration.
- Delivered milestone-based artifacts including system specification, class diagrams, sequence/state models, and a slide deck demonstrating implementation, challenges, and lessons learned.
- Ensured code quality and maintainability through documented workflows, continuous commits, and clear architecture justification aligned with software engineering quality attributes.

AI-Driven Contract Analyzer

Doha, Qatar

Team Member

Oct 2025 – Oct 2025

- Developed an enterprise-grade AI workflow for contract lifecycle automation using machine learning and API-based data processing.
- Built a smart contract text pipeline capable of extracting terms, detecting risk clauses, and assisting lifecycle decisions through automated inference.

- Designed and deployed a rapid prototype integrating automated document parsing, QDB business logic, and model-driven decision support.

Silatha Word Search Game

Remote

Solo Developer

Jan 2025 – Mar 2025

- Sole developer of a fully deployed, production-grade web game built with React 19 and Vite, featuring procedurally generated word search grids (10×10 to 18×18) across 6 difficulty levels.
- Designed and implemented a custom grid engine from scratch: 8-directional word placement with collision detection, weighted random letter fill, and a deterministic fallback to guarantee every puzzle is always solvable on load.
- Built a real-time drag-and-touch interaction system supporting both mouse and touch events, with stale-closure-safe state management using useRef mirroring ensuring reliable input handling across all device types.
- Integrated Firebase Authentication (anonymous + email/password) and Cloud Firestore for persistent per-user progress tracking storing best times, attempt counts, and level unlock state without requiring forced registration.

Social Media Platform

Doha, Qatar

Team Member

Jan 2026 – Apr 2026

- Built a full-stack Twitter/Instagram-style social media platform across both phases frontend in Vanilla JS, HTML5, and CSS3 (Flexbox/Grid) with full auth, posts, likes, comments, and follow system; backend in Next.js and React with Prisma ORM and a relational database, exposing REST APIs and a platform analytics dashboard.
- Contributed across the full stack within a four-person team, handling both UI implementation and database layer design including data modeling, seeded DB initialization, and optimized Prisma queries for filtering, sorting, and aggregation server-side.

Conference Review Database

Doha, Qatar

Team Member

Mar 2025 – May 2025

- Designed the full ERD and relational schema, then implemented all Oracle SQL tables, constraints, triggers, sequences, and data-integrity rules.
- Developed a Java application supporting secure login, paper submission, updates, reviewer assignments, and workflow management.
- Built automated paper-status and conference-summary reports using SQL views, improving clarity and decision-making for the review process.
- Integrated audit-logging triggers to capture all critical author and paper transactions, ensuring accountability and traceability across the system.

Event Management System

Doha, Qatar

Team Member

Oct 2024 – Dec 2024

- Built a full Events Management System in Java using custom data structures (hash table, linked lists, and binary search tree) to efficiently manage events, attendees, and date-based queries.
- Implemented a 367-slot hash table with a custom day-of-year hashing function, plus BST-based attendee management supporting fast insert/search and pre-order listing.
- Developed an interactive console application with persistent storage, enabling event creation, attendee registration, event removal, and automatic save/load using object serialization.

ACTIVITIES AND LEADERSHIP

IT Student Task Force (STF), Information Technology Services Department

Doha, Qatar

Student Assistant

Aug 2025 – Oct 2025

- Updated and maintained the ITS website interface, ensuring accurate and user-friendly content.
- Contributed to enhancing student engagement by delivering clear and accessible digital information.

Event and IT Member, Research Complex

Doha, Qatar

Student Assistant

Jan 2025 – Present

- Managed event registration, handled participant check-ins, and provided front-desk support.
- Performed administrative duties including data entry, tracking attendance, and preparing documents using Excel and Word.

Shell Intilaaqah Entrepreneurship Program

Doha, Qatar

Participant

Sep 2025 – Dec 2025

- Completed intensive training in opportunity analysis, market research, financial planning, and foundational business modeling.
- Collaborated with mentors to refine business strategy, assess risks, and prepare a professional investor-ready pitch.
- Strengthened entrepreneurial skills in problem analysis, creativity, teamwork, and strategic decision-making through hands-on workshops and case exercises.

Artificial Intelligence Organization, Qatar University

Doha, Qatar

Events member

Apr 2025 – present

- Assisted in coordinating and executing campus-wide initiatives such as AI Week and the Innovation Program, enhancing visibility and engagement with AI research.
- Contributed to the setup and technical support of demo stations, ensuring smooth operation of hands-on experiences and presentations.

Mechatronics Committee, Qatar University Student Club

Doha, Qatar

Events Member

Nov 2025 – Present

- Support the planning and execution of robotics and mechatronics-focused workshops, competitions, and technical events for engineering students.
- Collaborate with committee teams to prepare hands-on demonstrations involving sensors, actuators, Arduino kits, and simple robotic mechanisms.

SKILLS

Programming Languages: Python, Java, JavaScript, SQL, HTML/CSS

AI, ML & Data Tools: TensorFlow, OpenAI API, Federated Learning, Reinforcement Learning, Web Scraping, n8n, API Integration

Machine Learning Engineering Skills: Model Optimization, Data Pipelines, Feature Engineering, Monitoring & Error Handling, Prototype Deployment

Research & Applied AI Skills: Experimental Design, Feasibility Studies, Dataset Preparation, Performance Evaluation, Automation System Design

Frameworks & Development Tools: Git, GitHub, Raspberry Pi, JavaFX, VS Code, Eclipse, SQL Developer, React, Vite, Firebase,

Soft Skills: Technical Communication, Research Coordination, Project Management, Problem Solving, Critical Thinking

Languages: English (Fluent), Arabic (Proficient)
